

Until recently, Software Asset Management (SAM) has been put on the backburner within organizations. Nowadays C-level management understand their accountability and have become more and more aware of the risks associated with being non-compliant. However, getting different departments to understand the benefits in SAM can be difficult. In addition, providing customized reports that are relevant to each of the key stakeholders and business units across an organization can be time consuming, drawing limited success due to the reported information quickly becoming out of date.

From speaking with our customers we saw an opportunity to help organizations realize the benefit of delivering a mature SAM program by representing the data in a way that is meaningful across a multitude of business departments. Empowering all associated major stakeholders with relevant information can

benefit the organization by improving cross departmental collaboration resulting in improved asset governance and enhanced control throughout the software asset lifecycle. This can result in proactive compliance management and improved return on software investments.

License Dashboard Portal is a flexible reporting and analysis solution, utilizing Qlik Sense technologies, enabling cross platform data visualization and discovery. LDP provides simple navigation, starting from customized tiles through to flexible dashboards and down to the detailed report information. Dashboards include inventory coverage, contracts and entitlement, software surplus, compliance and risk, all displaying the information needed to make informed decisions.

You have the option to personalize your 'My Dashboard' workspace, pinning and customizing tiles linked to your filtered dashboards, giving you exactly the information you need at the touch of a few buttons.

Once you have pinned custom tiles

to your 'My Dashboard', you will see a single metric providing a high level overview of the summarized information. Clicking on the tiles takes you to the Qlik Sense powered dashboard enabling you to explore the data visually. From a dashboard you can drill down one further level to see the detailed information that is driving this information.

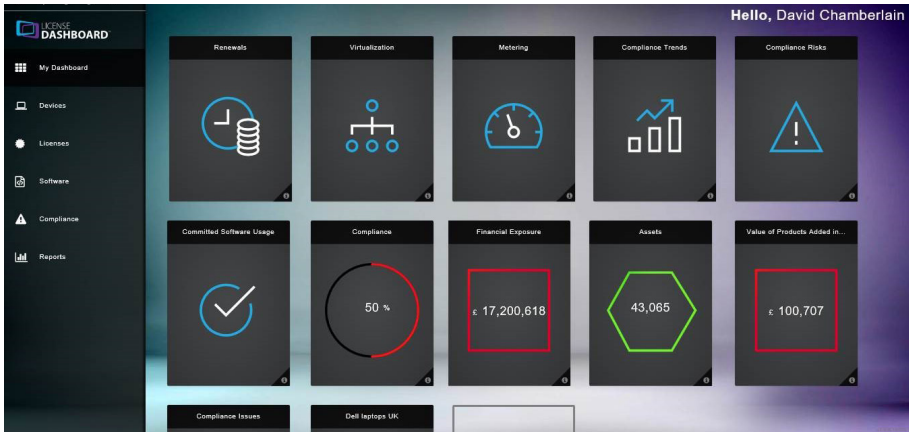

From this information you can be made aware of any risks that have occurred, and exactly where they are taking place.

Close to the graphs or images that display your asset information is the option to drill down into the raw data and show you the granular details of your estate – making it simple to understand your data evidence.

C-Level involvement is critical to a SAM program's success. Not only can they grasp the full cost of existing investments to allow for cost optimization, it provides accurate information for future investments.

License Dashboard Portal has been created to optimize the value of data collated and held across the different products within the License Dashboard Platform. Furthermore, License Dashboard Portal makes your data accessible and meaningful to any business unit/department involved in the SAM process.

With this in mind, License Dashboard Portal introduces personas to suit the needs of different stakeholders; Finance, IT, SAM, Organizational Management. Each stakeholder can personalize their dashboard so the reports they need are at their fingertips. We understand that different organizations have different responsibilities, License Dashboard Portal allows you to customize personas making them flexible enough to work with you.

### Business Benefits

- Real time information at your fingertips
- Valuable data to make informed decisions
- Exportable reports to share across your organization
- Armed with information anywhere, anytime
- Across any device
