

DATASHEET

LD Portal Lite

Version 1.0

LD Portal Lite brings extensive reporting functionality to huge volumes of Software Asset Management data.

Organizations can now realise the benefit of delivering a mature SAM program by representing the data in a way that is meaningful across a multitude of business departments and a variety of roles. The potential impact of ITAM/SAM data must be strictly controlled in terms of confidentiality, brand perception and legislation.

ITAM/SAM systems can display commercially sensitive data such as:

- Contractual data including renewal dates, supplier details, current commercials
- Inadvertent deployment details that offer value to competitors, actual vendors or alternate vendors
- Apparent non-compliance values where deployment numbers are out of kilter due to a rollout or the system is awaiting license details, true up or contract renewal

With LD Portal Lite, access can be controlled to ensure data is safely published to the correct individuals enabling them to navigate vast swathes of data.

Existing License Dashboard Cloud Console users can now expect the following benefits when switching to LD Portal Lite;

Additional security - Control sensitive ITAM data across your business. Access to individual reports can be tailored to meet the security requirements of the organization.

Simplified search – Instantly locate your desired report with the LD Portal Lite search functionality.

Intuitive interface - Reduce training time for new users thanks to LD Portal Lite's easy to understand interface.

Increased speed – Quickly browse between reports with reduced navigation time.

Improved export – Reports are automatically exported with intelligent naming convention.

Instant access – Browser based app ensures you have access to your permitted data anytime, anywhere. between each license type and make strong recommendations for predicted spend.

LD Portal Lite is available to License Dashboard on-premise or managed service customers alongside the full License Dashboard Portal BI tool.
