

Check IT

A free assessment of your IT estate to identify software optimization opportunities and areas of potential risk

Check IT is an assessment of your IT vitals giving an understanding of exactly what is deployed across your organization's IT estate.

This free review is a lite-touch experience, connecting to your environment through our own agentless discovery tool, or directly to tools that you already have in place, to take a reading of what you have deployed. Once License Dashboard has collected this information, we will analyze the data and produce a simple report that details the health of the software and hardware being used by your employees.

Providing critical intel to your organization's deployment status

Within the report we will include exactly how many pieces of software are installed and what versions they are running, highlighting any areas that could be opening your organization to risk of security breach if deployed versions have passed the vendor's End of Support date.

Further analyzing your deployed software by release date and taking into account deployed version versus quantity of newer releases gives valuable insights and helps grade the age of your software footprint, highlighting areas likely to become obsolete or requiring upgrade in the near future.

Business Benefits

- Understand obsolescence challenges and risks
- Identify potential cost savings
- Rationalize application sprawl with software categorization
- Increase transparency of IT organizational assets
- Check anti-virus deployment
- Mitigate software risks and reduce software renewal costs

Check Security and Rationalize Your Software

Check IT also reports on warranty information for your hardware and a security update on which of your end points have anti-virus installed.

Your software footprint will also be categorized by software type helping you to identify multiple products doing the same task, opening the door to rationalization of your approved software catalogue.

A key aspect to Check IT is identifying old, unused or duplicated accounts via Active Directory analysis to ensure you keep network access secure and up to date, as well as reviewing service accounts and domain admins.

Get started with your Check IT review

Contact License Dashboard to begin your free review and learn how an effective Software Asset Management program, including industry standard software governance procedures, polices and procedures can optimize your software spend, reduce risk of license non-compliance, protect against cybersecurity threats and speed up manual tasks.

Check IT - End of Life Report

The Check IT End of Life report details the end of life date for every detected piece of software, displaying a ten year projection of the relevant dates.

Users can also filter their end of life dates by product and understand at a glance the number of installs affected by any end of life date.

LICENSE DASHBOARD IT Insights Report - Product Categorisation

Check IT - Product Categorization

Check IT makes it easy to understand where your organization has multiple types of software installed per application category.

This valuable report allows you to rationalize your software portfolio and reduce spend by standardizing on software, rather than purchasing from multiple suppliers.
